BUSINESS REQUIREMENTS DOCUMENT

Streamlining Banking Support Operations | XYZ Investment Bank

Purpose and scope

Define the core business and solution needs for improving application support during the move from an offshore-only to a mixed-shore model. Option 3 from the Business Case remains the preliminary direction: a centralized support operations capability supported by clear processes and appropriate technology. No vendor or final architecture is selected.

1. Business requirements

ID	Requirement	Priority
BR-01	Coordinate application support across onshore and offshore teams.	High
BR-02	Clarify application ownership and escalation responsibility.	High
BR-03	Standardise support procedures and workflow.	High
BR-04	Make support knowledge easier to find and use.	High
BR-05	Improve visibility of request status and outcomes.	High
BR-06	Use support outcomes to improve procedures over time. (Proposed)	Medium

2. Stakeholder requirements

ID	Stakeholder group	Core need
SR-01	Business users	Raise issues clearly and understand progress and next steps.
SR-02	Offshore support analysts	Find procedures, identify owners and follow clear escalation routes.
SR-03	Application owners (stakeholder role to validate)	Receive appropriately routed issues with enough context.
SR-04	Support management (role to validate)	See support activity and outcomes to coordinate work.
SR-05	Risk / compliance / security (involvement to validate)	Ensure approved access and relevant banking controls are followed.

The onshore support analyst remains a proposed future-state role in the existing persona/To-Be artifacts; no current stakeholder requirements are attributed to this role.

3. Solution requirements

3.1 Functional requirements

ID	The solution/process should…
FR-01	Record support requests and identify the affected application.
FR-02	Support triage and assignment to a responsible team or role.
FR-03	Make application ownership or the ownership route available to authorised users.
FR-04	Show authorised users request status and progress.
FR-05	Provide a consistent way to find current support procedures.
FR-06	Support escalation and preserve handover context.
FR-07	Record resolution details and closure.
FR-08	Show a basic view of support activity and outcomes; exact measures are not set.
FR-09	Support coordinated work across onshore/offshore roles in the future model.

3.2 Non-functional requirements

ID	Requirement
NFR-01	Security: access follows approved roles and permissions.
NFR-02	Auditability: retain relevant request history where required by policy.
NFR-03	Usability: core tasks are clear for relevant users across locations.
NFR-04	Availability/performance targets must be agreed; the brief gives no numeric targets.
NFR-05	Assess existing approved tools before proposing new technology.

4. Design considerations

ID	Design consideration	Aligned artifact
D-01	Make request entry straightforward.	To-Be: Raise request
D-02	Make status and next step clear.	To-Be: Track & triage
D-03	Make support knowledge easy to locate.	To-Be: Investigate
D-04	Make ownership and escalation routes clear.	To-Be: Escalate & resolve
D-05	Make resolution and closure easy to record.	To-Be: Confirm & close
D-06	Show useful support activity/outcomes.	To-Be: Learn & improve

5. Requirements-to-artifact alignment

Existing artifact / issue	Requirement links	Next use
Business Case / mixed-shore transition	BR-01; FR-02, FR-06, FR-09	Jira workflow/handover stories
As-Is BMC / fragmented knowledge	BR-03, BR-04; FR-05; D-03	Knowledge-related Jira stories
As-Is Process Map / unclear ownership and escalation	BR-02; FR-03, FR-06; D-04	Ownership/escalation stories
As-Is Process Map / limited visibility	BR-05; FR-04, FR-08; D-02, D-06	Tracking/reporting stories
Personas and To-Be Experience Map	SR-01, SR-02; FR-01, FR-04, FR-07; D-01, D-02, D-05	Figma flow and linked Jira stories
Fishbone Diagram	BR-02 to BR-06	Check root causes are addressed without treating assumed causes as proven

6. Alignment with existing project artifacts

Artifact	Alignment check
Business Case	Keeps the same goal/objectives and Option 3 as a preliminary recommendation—not an approved final solution.
As-Is BMC and Process Map	Addresses 120+ applications, offshore support, scattered knowledge, unclear ownership and limited visibility.
Fishbone Diagram	Reflects the existing cause categories; inferred causes remain inferred.
Stakeholder Map and Personas	Business users and offshore analysts are current-state roles; onshore analyst remains proposed future state. Other role details need validation.
To-Be Experience Map	Keeps the same six journey stages from raising a request through continuous improvement.
Future Jira/Figma	Use these IDs to guide stories and screens. Do not add features without a clear link to the agreed scope.
